Summary

Full Stack Software Engineer with **4+ years of experience** across four organizations, building and integrating web applications across streaming media, global consulting, and banking platforms. Currently a Full Stack Developer at **DigitalDatum Inc.**, working across **Java, Python, JavaScript, TypeScript, React.js, Node.js, Angular.js, and Next.js**, with additional depth in RESTful API design, SQL/NoSQL databases, containerized deployments, CI/CD, and cloud platforms including **AWS and GCP**. Delivered production work on three client engagements at Kellton Tech Solutions, including **Sony LIV and Boston Consulting Group**, and sustained a 53-application BFSI production-support role for **Citi Bank**. Holds a Master's in Computer Science from Indiana University Bloomington, with applied machine learning project work spanning large-scale data analysis and satellite-imagery classification.

Technical Skills

- **Programming Languages:** Java | Python | JavaScript | TypeScript | Groovy
- **Frontend Development:** React.js | Angular.js | Next.js | HTML5 | CSS3
- **Backend Development:** Node.js | Nest.js | RESTful APIs | GraphQL | Apache Tomcat | Firebase
- **Databases:** MySQL | PostgreSQL | MariaDB | Neo4j | Cassandra
- **Cloud, DevOps & Version Control:** AWS | AWS SageMaker | GCP | Docker | Kubernetes | Jenkins | GitHub Actions | Git
- **Testing & QA:** Jest | Mocha | Selenium | JUnit
- **Tools, Platforms & Practices:** IntelliJ IDEA | Visual Studio Code | Linux | Ubuntu | Windows | Agile | SDLC
- **Machine Learning & Data:** XGBoost | KNN | Random Forest | GAN | Logistic Regression

Experience

DigitalDatum Inc. | Full Stack Developer

May 2026 – Present

Remote

- Design and build full-stack web applications end to end, pairing responsive React front ends with RESTful backend services that power core product functionality.
- Partner with cross-functional, fully remote teams in an Agile environment, turning requirements into shipped features across each sprint cycle.
- Containerize services with Docker and support CI/CD pipelines for build, test, and deployment, cutting down manual release steps.
- Write unit and integration tests and take part in code reviews throughout the development cycle, catching issues before they reach production.

Kellton Tech Solutions | Full Stack Developer

Aug 2023 – Nov 2025

Herndon, VA

Client: Sony LIV (OTT Streaming Platform)

Jun 2025 – Nov 2025

- Built reusable, responsive UI components in React.js and TypeScript, keeping design and behavior consistent across the Sony LIV streaming platform's front end.
- Integrated frontend modules with backend RESTful APIs, closing gaps in data flow between the UI layer and platform services.
- Diagnosed and resolved post-release production bugs, improving UI performance and the viewing experience for platform users.
- Contributed to code reviews and sprint ceremonies in a cross-functional Agile team, helping the team deliver consistently on schedule.

Client: Boston Consulting Group – Methane Emissions Platform

May 2024 – Oct 2024

- Built and maintained RESTful APIs in Node.js and Nest.js to support emissions-data workflows on a client-facing sustainability platform.
- Implemented server-side validation and processing logic to handle large-scale environmental datasets moving through the emissions-tracking pipeline.
- Improved API performance and reliability across the service layer, keeping data consistently available for downstream emissions reporting.
- Worked directly with BCG stakeholders in a client-facing setting, translating business requirements into working technical solutions.

Internal Training Project

Aug 2023 – Dec 2023

- Completed a structured Full Stack Development training program, building hands-on proficiency in React.js and Node.js.
- Built UI components and REST APIs for an internal enterprise application, applying training concepts to production-style code.
- Debugged across the full stack, building the technical foundation carried into later client engagements.

Tata Consultancy Services | Assistant System Engineer

Jan 2021 – Jun 2022

Remote

Client: Citi Bank

- Delivered continuous production support for 53 BFSI (Banking, Financial Services, and Insurance) applications, keeping business-critical banking workflows online and stable.
- Monitored batch jobs and resolved failures using JCL on Mainframe systems, minimizing downtime for dependent downstream processes.
- Partnered with development and business teams to drive timely resolution of recurring production issues.
- Built deep working knowledge of Citi Bank's BFSI application landscape and mainframe batch-processing environment through sustained high-availability support.

ACI Worldwide (EMEA) Ltd | Associate Software Engineer

Jan 2020 – Jun 2020

Bangalore, India

- Collaborated with development teams and stakeholders across a global payments technology organization to consistently meet release timelines.
- Wrote automated test scripts in Groovy, improving defect visibility and software quality release over release.
- Strengthened structured testing and defect-tracking practices that made release quality more consistent.

Projects

Modern Pigeon – Package Delivery Management System | [GitHub](#)

- Built a full-stack package delivery management application, developing both frontend interfaces and backend logic in React.js and Node.js.
- Implemented user authentication with Firebase, securing access to delivery tracking and account management features.
- Deployed and hosted the application on Google Cloud Platform (GCP), configuring infrastructure to support ongoing use.

Retail Sales Prediction | AWS | [GitHub](#)

- Developed a machine learning-based sales prediction system using **XGBoost** to forecast retail demand from historical sales data.
- Deployed the trained model via **AWS SageMaker**, exposing REST API endpoints for real-time inference requests.
- Evaluated and tuned model performance to improve prediction accuracy ahead of deployment.

Consumer Data Analytics Using Digital Twin | [GitHub](#)

- Analyzed **50,000+ customer transactions** stored in PostgreSQL to identify patterns in consumer purchasing behavior.
- Implemented KNN and Random Forest models to classify and predict consumer behavior segments from transaction data.
- Built GAN-based models to simulate consumer behavior scenarios as part of a broader digital twin approach.

Rice Crop Classification | Satellite Imagery | [GitHub](#)

- Built a rice crop classification model using Sentinel-1 satellite imagery as the primary input source.
- Preprocessed satellite imagery data to extract relevant features ahead of model training.
- Applied Logistic Regression to classify crop types, achieving an **F1-score of 0.85** on the evaluation set.

Education

Indiana University Bloomington (GPA: 3.73)

Master of Science in Computer Science

Bloomington, IN

May 2024

Relevant Coursework: Advanced Database Concepts | Applied Algorithms | Software Engineering | Applied Machine Learning | Cloud Computing | Applied Database Technology | Computer Networks | Data Mining

Vellore Institute of Technology (CGPA: 8.55/10)

Bachelor of Technology in Computer Science and Engineering

Vellore, India

June 2020

Relevant Coursework: Operating Systems | Computer Networks | DBMS | Software Engineering
